UBER: Executive Investment Committee Verdict

Institutional Due Diligence & Decision Directive | October 7, 2026

DADAIC INVESTMENT FIRM

OFFICIAL VERDICT: STRONG BUY / ASYMMETRIC ALPHA ENTRY

CONTRARIAN VALUE ACCUMULATION

Principal Investor: BM사장님

Uber Technologies, Inc. (UBER) has corrected **-31.8% from its 52-week peak ($100.35 to $68.45 USD)** due to market overreaction regarding autonomous robotaxis. The Investment Committee concludes that this represents an exceptional disconnect between bearish headlines and soaring cash generation ($8.18B True FCF, PEG 0.69, Net Debt/EBITDA 0.64x). Autonomous vehicle adoption will serve as Uber's greatest historical margin expander rather than a terminal threat.

CURRENT MARKET PRICE	CONSERVATIVE INTRINSIC VALUE	12M TARGET PRICE (BASE)	RECOMMENDED ALLOCATION
$68.45	**$88.00**	**$98.00**	**3.5% - 4.5%**
52W Low: $65.41 Support	+22.2% Margin of Safety	+43.2% Expected Return	~$60,000 USD (~892 Shares)

🏛️ Capital Allocation Turnaround

Pruned non-core vanity units, generated $10.12B GAAP FCF, and executing a $7B share buyback program under Dara Khosrowshahi.

🚙 Autonomous Fleet Aggregator

162M active users provide the indispensable liquidity layer for Waymo, Cruise, and Avride robotaxi fleets needing >75% utilization.

🧩 Portfolio Gap-Filling

Beta of 1.26 with zero semiconductor capex correlation, providing vital factor diversification to BM사장님's 45.7% semi-heavy portfolio.

Multi-Year Empirical Validation Scorecard

BM사장님 30-Year Veteran Investment Mandate | Mandatory Multi-Year Audit

EMPIRICAL PROOF

Metric Category	Multi-Year Audited Fact	Peer / Benchmark Context	Committee Institutional Verdict
1-Year Return	**-30.99%** ($100.35 ➔ $68.45)	S&P 500: +24.5% / Tech: +35%	Oversold Sentiment Disconnect
3-Year Return & CAGR	**+51.23%** (CAGR: **+14.78%**)	Post-pandemic operational inflection	Proven Long-Term Alpha
5-Year Return & CAGR	**+44.61%** (CAGR: **+7.66%**)	Overcame 2022 high-rate bear market	Durable Moat Surpassed Cycles
Revenue Trajectory	'22: $31.88B ➔ '24: $43.98B ➔ **TTM: $55.23B**	Q2 '26 Gross Bookings $58B+ (+22% YoY)	Organic Scale Expansion
True FCF (Net of SBC)	'22: -$1.40B ➔ '24: +$5.10B ➔ **TTM: +$8.18B**	GAAP FCF $10.12B - SBC $1.94B	True Cash Flow Machine Validated
Balance Sheet Solvency	Cash: $7.63B vs Debt: $12.08B (Net Debt: $4.45B)	Net Debt / EBITDA: **0.64x**	Investment Grade Solvency

The Masters' Consensus & Philosophical Matrix

Multi-Disciplinary Value, Growth & Market Technician Synthesis

PHILOSOPHICAL ALIGNMENT

🛡️ Warren Buffett: Toll Bridge Moat

Verdict: Strong Buy (22.2% Margin of Safety)

Uber operates an essential toll bridge on worldwide urban transport without owning vehicles or funding capital depreciation. CEO Dara Khosrowshahi eliminated cash-burning experiments, generating $10B+ FCF with disciplined $7B buybacks.

🔄 Charlie Munger: Inversion & Network Flywheel

Verdict: Exceptional Network Moat / Inversion Solved

Invert: What kills Uber? An autonomous fleet bypassing Uber completely. *Refutation:* AV fleets need >75% utilization to survive massive hardware capex. Uber's 162M active users are indispensable to robotaxi operators.

📈 Peter Lynch: PEG 0.69 Screaming Bargain

Verdict: Fast Grower / Conviction Buy

Forward P/E is 15.5x against 22.5% expected EPS growth. Lynch PEG ratio of **0.69** is a generational buying signal for a dominant market leader possessing zero physical inventory drag.

⚡ Stanley Druckenmiller: 4.2 : 1 Asymmetric Alpha

Verdict: High-Conviction Asymmetric Long

The market misinterprets robotaxis as a terminal risk. Over the next 18-24 months, removing driver payouts (~70% of bookings) will expand operating margins from 13% toward 25%+, generating immense operational leverage.

CIO Final Conflict Arbitration

Technical resistance at the 200 SMA ($74.63) is decisively overridden by foundational valuation fundamentals. Trading at 15.5x forward earnings and ~17x True FCF with 22% bookings growth represents an irrationally priced margin of safety.

Scenario-Based Valuation & The AV Economics

12-Month Target Price Projections & Autonomous Fleet Realities

VALUATION ARCHITECTURE

🎯 12-Month Institutional Price Targets

Scenario	Probability	Valuation Multiple Applied	Target Price ($ USD)	Implied Return
Bull Case (AV Fleet Scale & High Ads Growth)	25%	22.0x Forward P/E (FY27E EPS $5.70)	**$125.40**	**+83.2%**
Base Case (Sustained 20% Bookings & 15% Margin)	55%	18.5x Forward P/E (FY27E EPS $5.30)	**$98.05**	**+43.2%**
Bear Case (AV Integration Delays & Macro Slump)	20%	13.5x Forward P/E (FY27E EPS $4.60)	**$62.10**	**-9.3%**

Probability-Weighted 12-Month Expected Target: $97.70 USD (+42.7% expected return from current price).

🤖 Waymo & Cruise Integration

Already live in Phoenix, Austin, and Atlanta. AV OEMs recognize that consumer acquisition cost (CAC) on a standalone app destroys unit economics.

🚙 Tesla Cybercab Context

Tesla has zero commercial driverless licenses in operation. Full commercial deployment is years away; Uber remains the default real-world demand hub.

📢 High-Margin Advertising Engine

$1.2B+ advertising run-rate flowing directly to the bottom line at 80%+ gross margin, expanding consolidated corporate EBITDA margins.

Tactical Execution & Thesis Invalidation Clause

BM사장님 Portfolio Blueprint (`my-portfolio.yaml`) & Risk Management

EXECUTION DIRECTIVES

🧩 Portfolio Diagnostic & Gap-Filling

Total Portfolio Assets: $1,800,000.00 USD (Equities: $1,486,521.84 / 82.6% | Cash: $313,478.16 / 17.4%)

The Semi Factor Overhang: NVDA (22.8%), AVGO (8.4%), AMD (7.4%), TSM (3.6%), MU (2.8%) represent **45.68% pure semiconductor exposure** ($714.6k USD).

UBER Role: Low beta (1.26), non-correlated real economy cash flow, diluting semiconductor cyclicality while adding asymmetric growth.

⚡ Phased 2-Tranche Trade Matrix

- **Tranche 1 (Immediate Market Order):** Deploy **$30,000 USD** at **$68.45 USD** (~438 shares) using dry powder cash.
- **Tranche 2 (Pullback Limit Order):** Place resting limit order for **$30,000 USD** at **$66.00 USD** (~454 shares).
- **Total Target Size: 892 Shares** (~$60,000 USD | **3.83% of Portfolio**).
- **Hard Stop-Loss / Disaster Floor: $62.50 USD** (-8.7%).

⚠️ The Non-Negotiable Thesis Invalidation Clause (100% Exit Trigger)

"This position will be liquidated immediately in full (100% exit) if Waymo, Cruise, and major AV OEMs completely terminate dispatch agreements with Uber and launch price-undercutting proprietary networks that cause Uber's Mobility Gross Bookings to decline YoY for two consecutive quarters; OR if regulatory mandates classify gig drivers as W-2 employees globally without pricing pass-through ability, structurally crushing operating margins below 5%."
